PROFESSIONAL SUMMARY

Junior DevOps / Cloud Engineer focused on Infrastructure as Code (IaC) automation, continuous deployment, and Cloud Native environments. Hands-on experience designing and implementing scalable architectures on AWS using Terraform, containerization with Docker, and orchestration with Kubernetes. Passionate about DevOps culture, continuous monitoring, and optimizing CI/CD pipelines to accelerate release cycles with maximum reliability.

TECHNICAL SKILLS

Cloud & Orchestration	AWS (EC2, VPC, S3, IAM), Kubernetes, OpenShift
Containers & IaC	Docker, Docker Compose, Terraform
CI/CD & Monitoring	GitHub Actions, Jenkins, Git, Prometheus, Grafana
Languages & Scripting	Bash, Python, JavaScript, Node.js
Databases	PostgreSQL, MongoDB, Redis

KEY PROJECTS

Microservices Voting DevOps Platform (roxs-voting-app)

Deployment and containerization of a microservices-oriented architecture using Docker and Docker Compose. Configured Nginx as a reverse proxy and established data persistence with PostgreSQL and Redis. Implemented a complete observability ecosystem using Prometheus and Grafana, defining key metrics for proactive diagnostics and troubleshooting in local environments.

Secure AWS Infrastructure with Terraform

Automated provisioning of secure network and compute topologies on AWS (VPC, Subnets, EC2, S3) applying strict Infrastructure as Code (IaC) practices with Terraform. Developed highly modularized code to ensure cross-environment reusability, efficient remote state management, and dynamic variable handling.

CI/CD Pipeline Automation

Built fully automated workflows using GitHub Actions for continuous code validation, Terraform linting, automated testing, and Docker image packaging to registries. Implemented efficient Git-based branching strategies, optimizing integration times and significantly mitigating manual errors in deployments.

EDUCATION & TRAINING

DevOps Postgraduate Diploma • Mundos E (2024 - 2025)

Specialization focused on DevOps culture, agile methodologies, infrastructure automation, continuous integration and deployment (CI/CD), and Cloud Native technologies.

Full Stack MERN Developer Career • Coderhouse (2022 - December 2023)

Intensive path consisting of 4 consecutive certifications: Web Development, JavaScript, React JS, and Backend Programming with Node.js, Express, and MongoDB.

Continuous Education & Self-Paced Courses (Udemy)

- **DevOps with OpenShift (In Progress / Advanced Practices)** – Inst. Marcelo Guazzardo. Enterprise-scale container management and orchestration with OpenShift (Red Hat).
- **Python Programming (In Progress / Scripting Oriented)** – Inst. Ubaldo Acosta. Logic development and task automation using Python.
